

The Finnish Gynecological Association organized its meeting in Hämeenlinna on April 18.-19.,2013. The topics of the first day covered the diagnostics and treatment of benign ovarian processes. On the second day, the main focus of the morning session was depression, including its new treatment modalities. For the afternoon session, we had invited two speakers from Norway, Susanne Albrechtsen from Bergen and Ganesh Acharya from Tromso. Both speakers gave excellent talks and their presentations raised important comments and active discussion. The meeting was a great success with about 260 attendees. Please find the enclosed program in Finnish.

We very much appreciate and want to thank NFOG for the financial support that made it possible to invite Dr. Susanne Albrechtsen from Bergen, Norway. The title of her presentation was 'What is the optimal Cesarean section rate in Scandinavia?' The collaboration between Nordic Societies in our specialty is extremely important and we should make every effort to deepen this collaboration.
