

Status on The Nordic Robson Collaboration Group November 2014

The Nordic Robson Collaboration Group was established in 2012, to evaluate the maternal and fetal effects of different Cearean section rates within the different Nordic countries using the Ten Group Calssicification System. We are a group of clinicians, epidemiologists and statisticians from the 5 nordic countries with a shared scientific background in perinatal medicine. We have received grants from the NFOG Fund of D.kr. 60,000.00 in October 2012 (NF 12035) and of D.kr. 34,585.00 in October 2013(NF 13042).

We have held 3 scientific 2 days meeting in Copenhagen in October 2012, in May 2013 and May 2014..We have established data from all the Nordic Countries from 1994 to 2010 at Statistics Denmark, and the database includes data on 5.5 million deliveries. We arranged a 3 hours Pre-congress Symposium at the NFOG in Stockholm 2014, with 5 oral presentations based on data from this Nordic data set. We had 2 oral and 5 poster presentations at the subsequent NFOG Congress in Stockholm. The 5 presentations are under manuscript preparation and planned for publication. The program for the Pre-Congress Symposium including the presentations at the NFOG Congress is attached.

We will continue the collaboration updating the dataset and focusing on other maternal and fetal outcome in relation to mode of delivery.

Thank you to the NFOG Fund for sponsoring the meetings for our collaboration. On behalf of the group, best wishes

Thomas Bergholt

Members of The Nordic Robson Collaboration Group

Finland:	Pyykönen A, Tapper A-M	Helsinki University Central Hospital, Department of Obstetrics and Gynecology, Helsinki (aura.pyykonen@helsinki.fi ; +45 60 24 06 21) (Anna-Maija.Tapper@hus.fi ; +358 504271199)
