

Report from Oxford April-May-June 2022

During my monthly travels to the University of Oxford, I have worked closely with members of the research group of Professor Marian Knight. My post-doctoral project includes data from Swedish health registers; the Medical Birth Register, the Patient Register, the Cause of Death Register and the LISA database. It also includes data from the Clinical Practice Research Datalink, with primary care data and linkage to secondary care level, from practices across the UK. I have performed analyses on the Swedish dataset and data cleaning and management has been initiated on the UK dataset. There will be more trips to follow and the project will continue throughout 2022.
