

Elisbeth Epstein lecture on scientific meeting in Iceland funded by NFOG

The Icelandic association of obstetricians and gynecologists, FÍFK got funding to have Elisabeth Epstein to give a lecture on vaginal sonography of ovarian masses and how to use IOTA system and also a lecture on how to use vaginal sonography to diagnose and evaluate endometriosis.

The lecture was well attended and well received. Elisabeth had a lot of clinical cases that resulted in good discussions. The meeting was attended by both hospital specialists in obstetrics and gynecology, outpatient gynecologists and even young doctors in training.

FÍFK is grateful for the NFOG funding as it enables our small society of doctors to have important teaching sessions like this.
